

MycoGold® Wp for Potatoes delivers a diverse consortium of beneficial microbes that rapidly colonize the seed piece, emerging roots, and surrounding soil. This early establishment improves plant vigor, nutrient efficiency, and natural disease suppression—resulting in stronger stands and more uniform tuber development. Certain active ingredients also prevent various soil-borne pathogens and insect pests from crop damage.

**Net Weight 90 oz.**

**ACTIVE INGREDIENTS:**

29% Endomycorrhizal fungi

70% Culture consortium of a proprietary combination of beneficial microbial species developed to enhance plant performance, protect yield potential, and strengthen crop resilience under stress.

**CARRIER:**

1% dextrose powder

# MycoGold WP for Potatoes

## Soluble Powder Bio-Inoculant

**SOLUBLE TREATMENT:**

Solubilize product with non chlorinated water at a rate of 2 oz of Potato Blend product to volume of water equal to flow rate per 15K - 25K seed pieces. Spray directly on seed pieces.

One 90 oz. pouch of MycoGold® WP soluble covers up to 45 acres.

Use included one ounce measuring cup (x2) per acre.

- Do not use filters less than 50 mesh to prevent clogging
- Maintain agitation of product in tank
- May be mixed with compatible pesticides

**STORAGE AND HANDLING**

Store in a cool, dry place

Do not freeze or expose to temperatures above 35°C (95°F)

Close tightly after use Respect the best before date
